# What is Agro Coin

AGROCOIN is an international project aimed at creation of P2P platform where people and companies can directly credit each other without intermediaries. Make the world a better place! Make the prices lower! Reduce the fraud risk for market players! Help people in learning to invest! Open access for enterprises to financial services with low-level servicing.

AGROCOIN is a crypto coin that will become the means and guarantor of payment between users. This is a token that will become a tool for the agro-industrial market, and with the help of which users of the agro-exchange platform will be able to conduct their transactions on the purchase and sale of goods in the agricultural sector. Token AGROCOIN supports smart contract technology and was created to develop trust and positive reputation of a credit platform on the Ethereum ecosystem. AGROCOIN aims to conduct the fastest, most transparent and secure transactions.

# The Problem

Lack of knowledge and understanding of domestic and international legislation and trade rules;

Acute shortage of its own highly qualified specialists: lawyers and international economists;

Presence of intermediaries with high purchase prices;

Insufficiency of production capabilities that would allow producing and supplying large quantities to foreign markets;

Bureaucracy, which impedes the quick realization of goods due to the large number of documentary delays.

# The Solution

AGRODEX — This is a global B2B platform for trade in agricultural products and food products, as well as attracting investments without restrictions on production geolocation. Registered suppliers and customers will be able to enter into smart contracts, create exchange transactions, share related information and track the history of food prices in different parts of the world. Each product will be classified in the registry and valued at Agrocoin.

Any user has the opportunity to sell or purchase products in the foreign markets using a smartphone and not worrying about problems with logistics, cargo safety and financial losses. Innovation of our project is expressed in the following points:

1. Ease of making deals with a smart contract;
2. Efficiency and economic benefit for all participants in transactions;
3. Security, transparency and speed of transactions based on Blockchain technology.

# Advantages

When investing through our project, many problems will be solved, since the liquidity of investments is ensured and an objective assessment of their value will also be given. As a bonus, the entrance threshold will be reduced. Today you can feel yourself as a full-fledged member of the exchange even with just hundred dollars.

In addition, the Blockchain technology is very promising. If in the traditional market, there are several links between the occupier and the seller, each of which increases the final cost of the product, but now the exchange becomes the only intermediary. Due to this, goods and services will become more affordable for the consumers, and prices are more attractive for manufacturers.

Thus, the projects Agrocoin and AGRODEX gives a new impetus to the further development of the agro-industrial sector, provoke an increase in demand for the products of this industry, increase the attractiveness of this cluster for beginners and experienced specialists and stimulate the growth and development of international commodity exchange relations for the existing participants of trade relations. In addition, the prestige of work in the agricultural sector and the cost of labour of participants in the production process will significantly grow

# Platform & its Functionality

The participants register on bitagro.io, after which he/she gets access to the database of manufacturers and buyers of goods.

The buyer buys AGROCOIN cryptocurrency through the official exchange platform

Selection of a suitable price and quality offers and conclusion of a smart contract for the purchase of products with the seller.

bitagro.io launches the transaction processing process and contacts the logistic partners to guarantee the transaction and arrange the delivery of the goods

Crypto-currency becomes unavailable until the buyer receives the goods.

Crypto-currency becomes available, and the seller withdraws the earned money using the service platform bitagro.io.

A painting of a sunset over a beach. The sky is a mix of orange, yellow, and blue. The sun is low on the horizon, casting a glow over the water and the beach. In the foreground, there are a few people sitting on the sand. In the background, there are mountains and some trees.
